Lindab**Rainline**™

The Superior **Steel** Rainwater System,
also available in natural copper

Lindab®

We're here to help

At Lindab Building Products, our aim is to match the reliability of our products with that of our service. Customer support is a core part of our business philosophy.

Our customers are the people we meet on a daily basis, rather than the companies they work at. It is alongside all these people – designers and architects, fitters and installers – that we have built our trust. Lindab is a partner you can trust. Our relations are based on an in-depth understanding of the challenges our customers face. We create our solutions based on these needs and challenges.

We are always near

We are proud of the relationships we have developed with local authorities, housing associations, exclusive developers, contractors and end-users across the UK. Thanks to unique customer contacts, we can predict what you need and adapt our offering to suit specific local requirements. It is important to us, because it is important to you, that we optimise the various sales channels we have on each market.

We have a dedicated team of UK regional Business Development Managers who have been trained to the highest degree on our Rainwater System. Our team is available to visit you, we will give you full technical support on site and work closely with your designated contractor. Our team can also offer product training and marketing materials to enable you to make the choice that is right for you.

There when you need us

In a UK market undergoing rapid transformation, there are increasing demands on simplification, speed, flexibility and reliability. We meet these demands and simplify the construction process – before, during and after. We do this with a sustainable supply chain, efficient logistics and a customer-focused flow that creates greater value for you.

We have a committed customer support team at Profile House, our UK distribution centre. They can provide you with technical assistance, quotes, order entry and problem-solving solutions just by picking up the phone. Send us your building drawings and we will even do a "product take-off" for you free of charge.

Lindab in Brief

With over half a century of experience in the development, manufacturing and marketing of sheet-metal products, Lindab has become one of the leading international players in the construction and HVAC industries.

In 1957, Lindab started out as a small sheet-metal shop in Lidhult, Sweden, and the year after, Lindab moved to Båstad, on the Bjäre Peninsula in the south west of Sweden, where Lindab is situated today.

Lindab has since then expanded to a worldwide business with representation in more than 30 countries. Lindab is a supplier of products and system solutions for simplified construction and improved indoor climate, our main market is Europe. Through close dialogue with our customers, a flat organisation, knowledgeable employees and a strong corporate culture, we develop solutions that have a lower environmental impact and offer increased customer value.

A culture of innovation

There are three core values behind the drive and the culture of innovation that permeate our entire organisation; to continuously generate improvements for our customers and users.

Customer Success

The way we see it, success for our customers breeds success for us. Our endeavour to simplify construction for our customers helps to make their operations more efficient. We do this by leading the development of solutions in our main areas.

Down to earth

We strive for long-term relations based on uncomplicated, trustworthy conduct and an attitude of humility. Important factors are cost-consciousness and fast, efficient decision-making that avoids unnecessary bureaucracy.

Neatness and order

Good orderliness everywhere has a positive impact on efficiency as well as the overall image of the company, and also contributes to a feeling of pride when presenting Lindab.

Tel: 0121 585 2780 Fax: 0121 585 2782

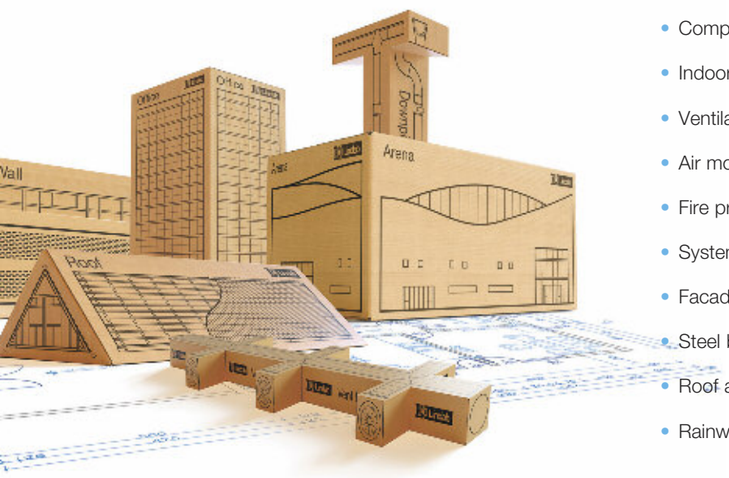
Good Thinking

Good thinking is a deeply rooted philosophy that guides us in everything we do. We believe that good thinking makes good solutions to the challenges we all face. Taking responsibility for what we do and how we do things is important to us. Because good thinking is not only about making life simpler and more comfortable for our customers and end users. It´s also about thinking in a global perspective, all the time. Knowing that we at Lindab are helping to make the world a better place.

We simplify construction

At Lindab, we simplify construction because it is in human nature to build. By simplifying in every stage, we make it easier to build sustainably. We develop products with the environment in mind. We invent complete solutions that meet the demands for comfort, simplicity and energy efficiency.

We do this so that you can continue building with a clear conscience – not just today, but also tomorrow.



What do we simplify?

With the service, support and availability we provide, our broad product portfolio of smart products and solutions builds an offering that simplifies the construction of energy-efficient buildings.

- Complete ventilation solutions
- Indoor climate solutions
- Ventilation products
- Air movement
- Fire protection
- System solutions for walls, roofs and joists
- Facade systems
- Steel building solutions
- Roof and wall cladding
- Rainwater systems

Have confidence

Our fundamental idea is to contribute to simplifying construction in all phases of the construction process: in the design phase of the product itself, its installation and performance. Quality management systems are applied throughout the business. Lindab's production and distribution units have quality systems certified to ISO 9001.

It comes naturally

Lindab's business is based on long-term sustainable and environmentally friendly systems in steel and sheet metal. We focus on minimising the use of raw materials, components, energy, packaging, and transport. Today 90 percent of our operations are certified according to ISO 14001. A full environmental declaration is available on request.

Right place, right time

Thanks to efficient distribution and local presence, we can offer customers in each country the right solutions. We have a network of more than 150 branches, almost 300 building contractors, more than 2,000 distributors and approximately 5,000 employees worldwide. And with full transparency we make fast, flexible, efficient deliveries – to the right place, at the right time, every time.

We have a network of approved distributors across the UK which can help you with orders, quotes and arranging visits from our regional managers. Deliveries are made from our distribution centre in the Midlands to your local distributor or directly to a site of your choice. Care should be taken for health and safety of personnel when handling consignments.

Normal delivery time is 3-5 working days, items that are not held in stock in the UK will have an extended lead time. Orders placed are subject to VAT at the current rate, terms and conditions apply. Carriage charges may be applicable.

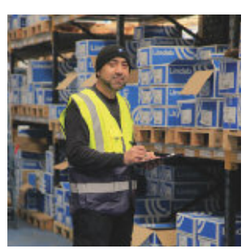
NEW

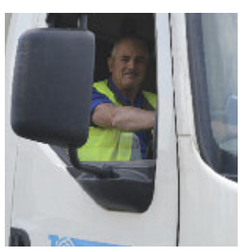
Lindab Express

Enhanced delivery times are now available for standard stocked items.

Although we always process customer orders efficiently and we are proud of our ability to delivery consistently on time-in full we know that there are occasions when this is not quick enough. Our new Lindab Express delivery service can guarantee next day delivery for orders received and acknowledged by our sales office before 11am.

Lindab Express is only available for standard items that are held in stock at our UK distribution centre. The Lindab Express logo is displayed next to applicable items. Express service is subject to availability, additional carriage charges will apply. Next day delivery may not be available to all postcode areas.





A few words about steel – a life cycle of green performance

Lindab's steel rainwater system has proved itself to be the most environmentally friendly material available, with a natural place in today's approach to green sustainability.

A study on the life cycle assessment of rainwater products in different materials has compared the environmental impact of products, processes and disposal of seven different materials, covering their entire life cycle from cradle-to-grave. This study covers materials frequently used in rainwater products such as aluminium, zinc, copper, cast iron, galvanised steel and plastic. This life cycle comparison includes the steps taken up until a product leaves the factory gate; extraction of raw materials, production, energy used, including transport, plus disposal, recycling or waste treatment after use. The environmental impact of all seven materials clearly shows that Lindab's steel, in a product life cycle study, has the lowest carbon footprint of any of its competitors.

The carbon footprint of steel

Lindab's steel has the lowest carbon footprint of any rainwater system, with up to 30% manufactured from recycled material, which is itself completely recyclable. The case for Lindab's steel is further proven with its long-life durability. The useful life of a component is of vital importance; the longer the lifetime, the fewer components need to be produced, making the environmental impact even less.

Lindab's steel is the ultimate material for roof drainage systems. It is strong, durable and made to last.

Life expectancy of various guttering materials

A more environmental focus

To accurately establish the environmental impact of Lindab's steel in comparison with other rainwater materials, a functional unit of one metre of downpipe, in seven different materials, was assessed and compared. The comparison considered the cradle-to-grave carbon impact, making allowance for the different lifespan of each material. The chart on the left lists the data and expectations used as input in the comparison.

Pipe dimension (mm)	Material	Weight (kg/metre)	Expected lifetime (years)
75	Galvanised steel	1.29	70
76.5	Aluminium	1.28	40
75	Zinc	1.45	50
75	Copper	1.45	50
75	Cast iron	6.61	50
68	PVC	0.58	10
68	PE	0.48	10

Product life cycle CO_2 impact

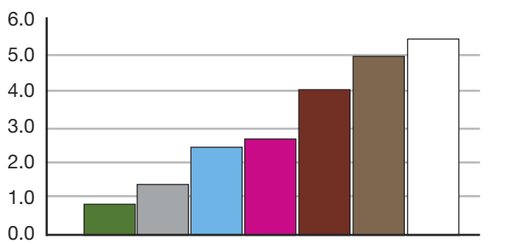
Increasingly customers are asking for the carbon footprint of products, in order to determine how far they contribute to climate change.

The Lindab steel product life cycle CO_2 study has highlighted how current CO_2 levels are 30% higher than in the pre-industrial era and how a doubling of levels in the atmosphere is expected to occur over the next century. The impact and implications of such changes are far-reaching.

It is with this in mind that Lindab strives to minimise the environmental impact caused by the company's operations and products; this environmental commitment means that products are developed based upon a life cycle perspective, with set targets for continual improvements.

Every component in the Lindab Rainline™ System is manufactured to the highest standards and simply snaps together for ease of installation.

Lindab steel – a green effect on today's environment



(GRW) Global Warming Potential relative comparison

As our study shows, all metals in the comparison have advantages over plastic materials when it comes to recycling with steel performing the best of all.

Features and benefits of Lindab Rainline

Made to last with the lowest environmental impact
Steel is the ultimate material for roof-drainage systems. It is much lighter than cast iron, easier to handle than aluminium and offers minimal thermal movement compared to plastic (which can move and crack causing leaks).

Low maintenance
The only maintenance required is an annual wipe or wash down ensuring a long service life.

Vandal resistant
Highly resistant to attack from vandals – new Vandal proof products can be used to further reinforce the bottom 2m of pipes.

Material and colour choice
Rainline is available in a choice of 11 standard colours (high-build polyester paint finishes) as well as plain galvanised. Coated finishes are UV stable – will not fade or crack. The whole system is also available in Aluzinc and natural copper.

15-year guarantee
Lindab Rainline High-Build Polyester coated products all come with a 15 year guarantee*. As long as installation and warranty conditions have been followed any defects to the coating will be replaced.

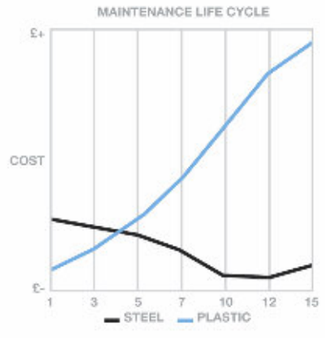
Choice of 5 gutter sizes
Lindab Rainline is available in a choice of 5 sizes to suit different roof sizes and prevailing local rainfall patterns.

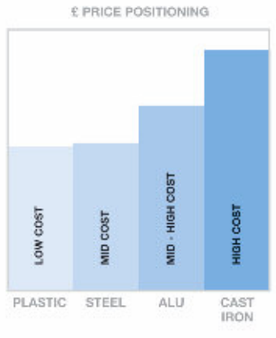
Quick and easy to install
Smart design solutions save installation time for professionals and make DIY easy. Pipes simply push together, snap mounting outlets, self-sealing stop ends, and click lock gutter joints and pipe brackets are just some of the unique product features.

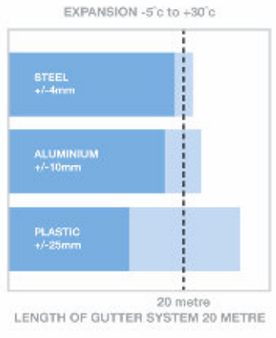
Stylish design for a variety of buildings
Designed for large or small, classic or contemporary.

Cost-effective solution
Competitively priced against leading plastic systems and inexpensive compared with aluminium and cast iron.

Minimum environmental impact
Tests have proven that Rainline steel systems reflect the lowest lifespan impact by minimising the use of raw materials, components, energy, packaging and transport.







New Features

Rainline has been developed by professionals to combine durability, flexibility and ease of installation. A policy of continual research and development has made Rainline steel systems the top choice for countless installers worldwide.

Here are just a few of the new features for 2016:

NEW Radius Gutter Bracket

The radius gutter bracket RSKR has been specifically designed to simplify installation on curved eaves sections and balconies. To achieve this our expert product development team have created a fascia bracket that also functions as a gutter joint with a rubber seal and a tolerance for a 4° alignment deviation at each joint.

Sections of standard gutters can easily be installed fitting to a radius in a faceted arrangement which will service a unique bow fronted building or convex feature without the need for expensive bespoke gutters.

NEW Vandal Range

The new Lindab Vandal range is a selection of reinforced downpipes and outlets that have been designed for use in areas with a lot of foot-traffic such as school playgrounds or public carparks.

The downpipes are made of 2mm hot dipped galvanised steel, have built-in stainless steel wall brackets and either a pipe shoe or a self-cleaning leaf trap with stainless steel filter.

The range is also available made from 1.5mm stainless steel plate and supplied unpainted.

The Vandal-proof products can be installed on the bottom 2m of each rainwater pipe stack and easily connect to a standard Rainline gutter and upper pipe section using a BUTK drain shoe.

NEW Finishes

Lindab introduces the painted coffee brown and unpainted natural copper Rainline finishes to the UK market.

Natural copper Rainline transforms a rainwater system into a highly desirable building feature.

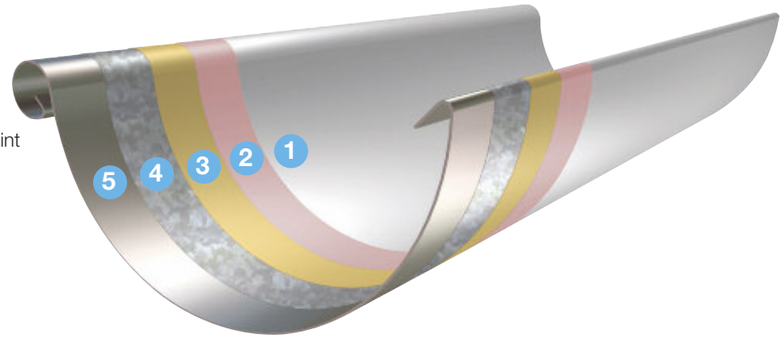
Coffee brown takes the number of standard colours to 11 and carries the Lindab 15 year warranty.*

*15 year warranty is not applicable to plain galvanised, Aluzinc or natural copper systems

Beauty that Lasts – Painted Rainline

Rainline is made from high-performance steel produced by the top European manufacturers. This high-performance steel ensures that Rainline is lightweight, durable and long-lasting, making it the gutter system of choice for both domestic and commercial use.

This steel has a thick layer of zinc coating on both sides which protects the steel core from corrosion and the top coat contains polymer grains that make the surface scratch resistant. This coating also has excellent flexibility which enables the sheet steel to be formed to produce various products without damage to the coating.



1. High-build polyester paint
2. Primer coating
3. Passivation layer
4. Zinc coating
5. Steel sheet

An extra-durable high-build polyester paint coating provides protection and extends the life expectancy of Rainline in excess of 70 years with minimal maintenance, only annual cleaning is recommended and touch up of any scratched paint.

Rainline painted finishes have excellent colour fastness, they are UV stable and the coating will not fade or crack. All painted Rainline is supplied with a standard 15 year warranty.

Colours displayed may vary from actual, NCS and RAL codes are the nearest colour match. Colour samples can be supplied to demonstrate true colour.

An Elegant Finish – Unpainted Rainline

Although not as long lasting as a painted system, unpainted Rainline finishes are often selected due to the attractive and elegant aesthetic. Natural weathering should be expected, regular cleaning of plain galvanised and Aluzinc systems are recommended to remove any white rust.

Unpainted finishes are not covered by Lindab's 15 year warranty and are not advised for projects in coastal regions or areas with a high corrosivity category.

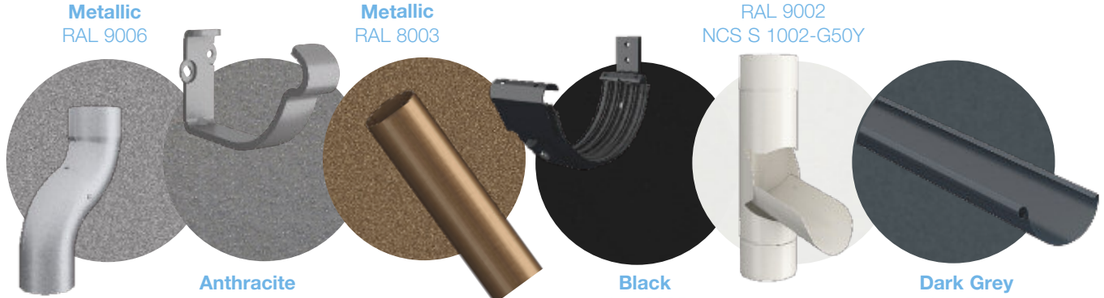
Plain Galvanised
Each piece of core steel is coated with 275g zinc per square metre, a naturally self-healing coating that protects against discolouration and rust.

Aluzinc
Cold rolled galvanized steel with a metal coating composed of Aluminium, Zinc and Silicon for superior wear resistance.

Natural Copper
A limited range of Rainline products are available in uncoated copper. The finish is highly desirable and provides excellent corrosion resistance once it has transitioned to a greenish verdigris patina.

Stainless Steel
Only Rainline Vandal proof products are available in a stainless steel finish. The products are made from 1.5m stainless steel plate.

Painted Rainline is available in a choice of 11 different colours, 3 with a metallic finish and 8 with a gloss finish:



Silver Metallic RAL 9006

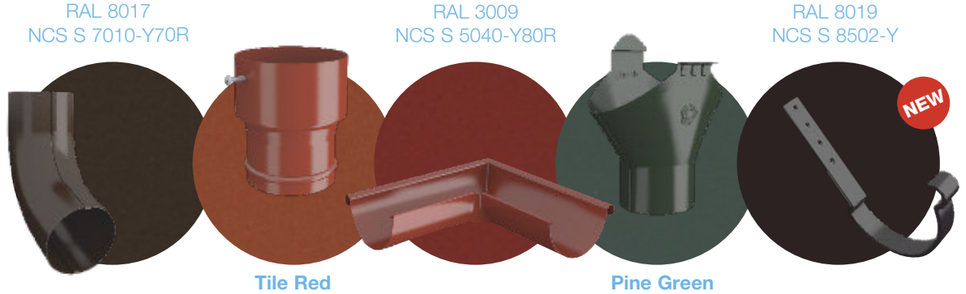
Anthracite Metallic RAL 9007

Copper Metallic RAL 8003

Black RAL 9005 NCS S 9000-N

Antique White RAL 9002 NCS S 1002-G50Y

Dark Grey RAL 7011 NCS S 7005-B20G



Brown RAL 8017 NCS S 7010-Y70R

Tile Red RAL 8004 NCS S 4050-Y70R

Dark Red RAL 3009 NCS S 5040-Y80R

Pine Green RAL 6020 NCS S 7010-G30Y

Coffee Brown RAL 8019 NCS S 8502-Y

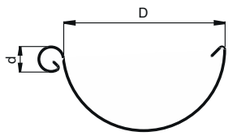
Simplifying the Science – Size Guide

It is important that the sizes of gutters and pipes used in a rainwater system are selected with consideration of the size of the roof and the position of downpipes in order to ensure that typical rainfall does not cause the system to overflow.

All gutter systems in the UK should be designed to BS EN 12056-3:2000 Gravity drainage systems inside buildings. Roof drainage, layout and calculation (AMD 17041), 2000.

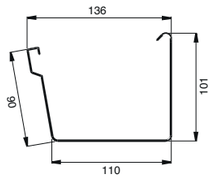
Rainline gutters are available in two shapes and five sizes. Half Round: 100mm, 125mm, 150mm, 190mm and Rectangular 136mm. Downpipes are available in four sizes: 75mm, 87mm, 100mm and 120mm.

Half Round Gutters (R)

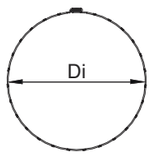


Size (mm)	D (mm)	d (mm)
100	107	17
125	123	17
150	155	17
190	192	22

Rectangular Gutters (RER)



Downpipes (SROR)



Size (mm)	Di (mm)
75	75
87	87
100	100
120	120

Roof Area

BS EN 12056-3:2000 requires that wind driven rain is taken into account when considering the effective catchment area. The standard assumes that rain falls at an angle of 2 units vertical to 1 unit horizontal which means that half the vertical height of any surface must be taken into account in calculations.

For a typical roof surface this means that the effective area is calculated from:

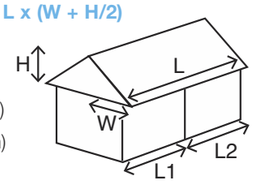
Effective Area, AE (m2) = L x (W + H/2)

Where:

L= Roof length (m)

W= Eaves to ridge width (m)

H= Eaves to ridge height (m)



Flow capacities

In order to select the appropriate gutter and pipe size combination it is necessary to understand the flow rate required and the flow capacity of the system. The presence of corners in the gutter reduces the capacity, where this is applicable a 15% reduction should be assumed for calculations.

Flow rate is calculated from:

Flow rate (litres/second)

= Effective Area x Rainfall Intensity

Flow capacities of the Rainline gutter-pipe size combinations are shown in the table below:

Flow Capacity (l/s)

Gutter	Downpipe							
	Centre Outlet				End Outlet			
	75mm	87mm	100mm	120mm	75mm	87mm	100mm	120mm
Half Round 100mm	1.64	1.64	–	–	0.82	0.82	–	–
Half Round 125mm	1.97	2.38	2.38	–	1.19	1.19	1.19	–
Half Round 150mm	–	2.93	4.25	4.32	–	2.16	2.16	2.16
Half Round 190mm	–	–	4.25	6.91	–	–	4.25	4.57
Rectangular 136mm	–	3.18	3.29	–	–	3.05	3.05	–

Pipe Position

The position of the pipe has a significant effect on the flow capacity of a rainwater system, this can be seen by comparing the flow capacities table for a gutter run with a centre outlet to the table for a gutter run with an end outlet.

A gutter ratio can be used in conjunction with the effective roof area to account for the required adjustment in system flow rate.

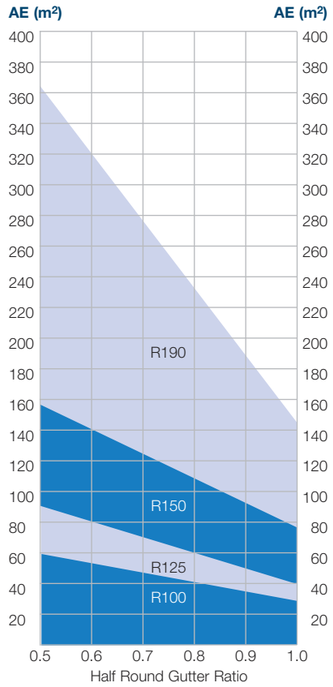
For a typical gutter run the ratio of gutter lengths is calculated from: **Gutter Ratio = L1 / (L1 +L2)**

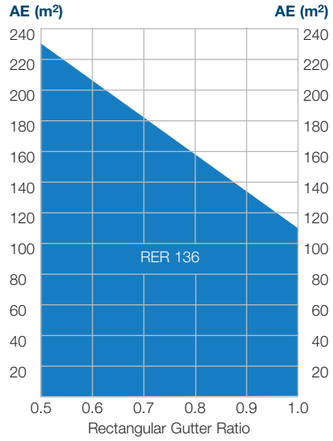
Where: L1 ≥ L2

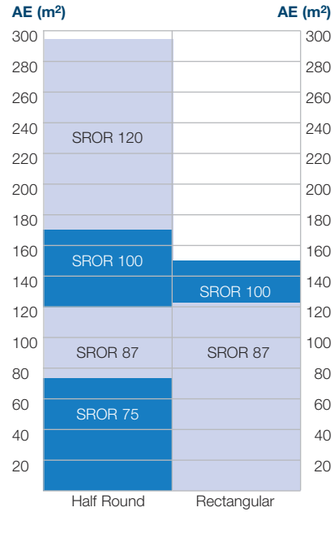
Selecting Gutter Size

There is no standard rate of rainfall in the UK so for accurate calculations refer to an approved weather authority to get a site-specific rainfall level. A worst case storm of 0.022 litres per second per square metre has been used in our calculations.

The charts below allow effective area and gutter ratio to be used to choose the correct gutter and pipe size.





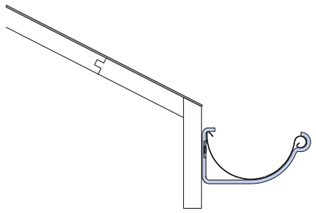


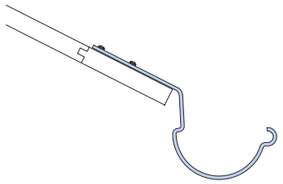
Understanding Brackets

Roof construction type, stage of build and preferred method of installation can influence the type of bracket chosen for a project. The main bracket types are fascia brackets and rafter brackets.

Fascia Bracket

Fascia brackets fix to a fascia board or directly to the wall of a building. Vertical fascia boards are most common in the UK however adjustable fascia brackets are available for use on angled fascia boards.





Rafter Bracket

Rafter brackets are fixed directly to the roof rafters, typically on buildings with overhanging roof structures or with particularly uneven wall surfaces. Rafter bars can be twisted to enable side fixing where access to the top of the rafter is limited.

Rafter bars should be bent to the required angle based on the pitch of the roof, a KBO bracket bender can be used. Rafters can be twisted or bent for a charge of £2 per bracket.

Number of Brackets

Brackets should be installed at 800mm centres. End brackets should be installed 100mm from roof edge.

To calculate how many brackets are required use the following formula:

No. of brackets = (L ÷ 0.8) +1 Where: L = length of run in metres

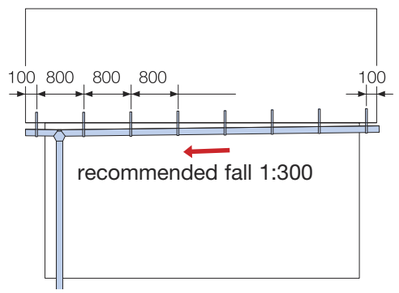
Bracket Installation

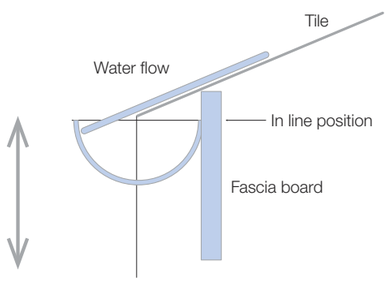
Gutters should be installed so that the gutter falls towards the outlet dropping by 10mm over every 3m length, (a fall of 1:300). A single run should not exceed 10m.

In order to achieve the required slope install the lowest bracket first (next to the outlet) and then the highest bracket (at the opposite end of the gutter run). Pull a string between the two brackets, the string indicates the level that the other brackets should be fixed.

Where multiple downpipes are positioned along one gutter run the gutter should be installed with a high point between the pipes and sloping towards each outlet.

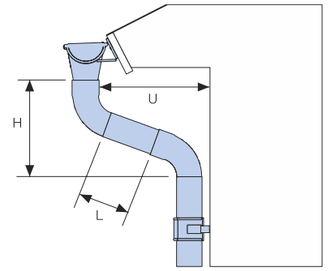
The front lip of the highest bracket should not be installed higher than the position horizontally in line with the roof edge. In areas with heavy snowfall the highest bracket should be installed lower.





Creating Offsets

The roofline of a building, where the gutter is fitted, is commonly positioned away from the walls of the building. An offset arrangement is used to connect the outlet to a downpipe run.



The measurement U is the projection of the offset. An SOKN one-piece offset is available with a fixed projection of 100mm.

For larger projections an offset can be created using pipe bends and a length of SROR pipe or an MST intermediate pipe cut down to the required length.

The table can be used to indicate the length of the pipe required to make the offset.

Bends at an angle of 70° are typically used to create offsets, 85°/90° bends may be preferred for very long projections however flow capacity will be reduced.

A BK conical bend should be used at the top of the offset. If the pipe used has a spigot bottom a BK conical bend should also be used at the bottom of the offset. If the pipe used does not have a spigot bottom a BM pipe bend with socket should be used at the bottom.

Intermediate pipelength at 70° bends

U mm	H mm	L mm
220	275	0
270	290	100
300	300	135
350	320	185
400	340	240
450	355	290
500	375	345
550	395	400
600	410	455
650	430	505
700	450	580
750	465	610
800	485	665
850	505	720
900	520	770
950	540	825
1000	555	880
1050	575	930
1100	595	985
1150	610	1040
1200	630	1090

Pipe Bracket Installation

Pipe brackets should be installed at 1.5m centres. The highest pipe bracket should be installed 150mm from the offset or hopper head at the top of the pipe stack. A spirit level or plummet line can be used to align the other brackets.

The main pipe bracket types are screw to wall brackets and drive-in brackets. Choice can be influenced by the construction type of the building, installer preference or regional conventions.

SSVH and SVHA pipe brackets are screw to wall brackets. SSV and SV pipe holders are used with SST spikes to form drive-in brackets. Rainline pipe brackets can have a click lock mechanism or a wedge lock mechanism.

Screw to Wall Bracket

Guide to steel rainwater system components

Gutters & Fittings

Gutters

R – Half Round Gutter

- Roll formed 0.6mm steel with bead stiffened fronts
- Can be joined using RSK gutter joint or roll joint method
- Supplied in 3m lengths as standard
- Also available in 2m or 1m shorter lengths

RER – Rectangular Gutter

- 0.6mm steel box gutter with front lip detail
- Joined using RERSK gutter joint
- Supplied in 3m lengths as standard

Gutter Joints

Used to join gutters or gutter angles

IMPROVED RSK – Gutter Joint with Rubber Seal

- Designed with click and lock mechanism for easy installation
- Built in EPDM rubber gasket
- Doesn't require sealant or screws
- Hinge now strengthened

RERSK – Rectangular Gutter Joint with Rubber Seal

- For use with rectangular gutters
- Includes central marks to aid with gutter positioning
- Built in EPDM rubber gasket
- Doesn't require sealant or screws

Stopends

Required for each end of a gutter run

RG – Self-Locking Stop End

- Universal left and right handed, surplus ear should be removed
- Push fits around the outside of the gutter
- Built in EPDM rubber seal, doesn't require sealant or screws

RGV – Left Hand Stop End

- Required for 190mm gutters
- Fits to left hand end only
- Sits inside gutter end, fitted using roll joint method
- It is recommended that sealant is used

RGH – Right Hand Stop End

- Required for 190mm gutters
- Fits to right hand end only
- Sits inside gutter end, fitted using roll joint method
- It is recommended that sealant is used

RERGV – Left Hand Rectangular Stop End

- For use with rectangular gutters
- Fits to left hand end only
- Sits inside gutter end
- It is recommended that sealant is used

RERGH – Right Hand Rectangular Stop End

- For use with rectangular gutters
- Fits to right hand end only
- Sits inside gutter end
- It is recommended that sealant is used

Gutter Angles

Used to continue gutter line around a corner

- **Universal left and right handed**
- **Require 2 RSK gutter joints**

RVI – Internal Gutter Angle

- Required for roof features such as recesses or extensions
- Available to fit 90° or 135° corners
- Alternative angles can be manufactured on request

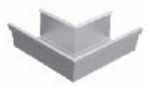
RVY – External Gutter Angle

- Required for roof types such as hipped or cross-gable
- Available to fit 90° or 135° corners
- Alternative angles can be manufactured on request

RERVI – Internal Rectangular Gutter Angle

- For use with rectangular gutters
- Required for roof features such as recesses or extensions
- Available to fit 90° or 135° corners

RERVY – External Rectangular Gutter Angle



- For use with rectangular gutters
- Required for roof types such as hipped or cross-gable
- Available to fit 90° or 135° corners

Gutter Outlets

Used to connect gutters to downpipes

OMV – Gutter Outlet

- Can be positioned at any point along the length of the gutter
- Click fit for easy installation
- Requires hole to be created in the gutter

OK – Gutter Outlet

- For 190mm gutters or to fit 75mm pipes to 150mm gutters
- Can be positioned at any point along the length of the gutter
- Uses flex-fit flaps to secure
- Requires hole to be created in the gutter

REOK – Rectangular Nozzle

- For use with rectangular gutters
- Can be positioned at any point along the length of the gutter
- Uses flex-fit flaps to secure
- Requires hole to be created in the gutter

Fascia Brackets

Used for securing gutters by fixing to fascia boards

- **Recommended maximum 800mm interval spacing**
- **Should be installed to create fall of 10mm per 3.0m run**

KFK – Fascia Bracket

- Most popular fascia bracket for UK installations
- Solid 5mm steel structure
- 1 standard screw hole and 1 oval hole to allow precise fixing adjustments

NEW

KPK – Lightweight Fascia Brack

- Folded steel lightweight design
- Reduced metal content
- More environmentally friendly
- 4 oval fixing holes to allow precise fixing adjustments

K24 – 240mm Flex-Fit Fascia Bracket

- Extended 240mm bracket for larger gutters
- Uses flexible clips to hold the gutter in place
- 4 screw holes offer more secure fixing

K07 – 70mm Flex-Fit Fascia Bracket

- 70mm bracket with 2 screw holes
- Uses flexible clips to hold the gutter in place
- Clips attached with stainless steel rivets

IMPROVED SSK – Adjustable Fascia Bracket

- For use on angled fascia boards
- Locks in place at 7°, 14°, 18°, 22°, 27°, 38° or 45° angle
- Now with fixed hook front
- Requires 1 fixing screw per bracket

REK07 – Rectangular 70mm Flex-Fit Fas

- For use with rectangular gutter
- 70mm bracket with 2 screw holes
- Uses flexible clips to hold the gutter in pla
- Clips attached with stainless steel rivets

Rafter Brackets

Used for securing gutters by fixing to roof rafters

- **Recommended maximum 800mm interval spacing**
- **Should be installed to create fall of 10mm per 3.0m run**
- **Should be bent to required angle using KBO bracket bender**

KFL – 200mm Rafter Bracket

- Most popular bracket for UK installations
- Solid 5mm steel, 25mm wide rafter bar with 4 fixing holes
- Can be supplied bent or twisted for side fixing for additional charge of £2 per bracket

KFM – 150mm Rafter Bracket

- Shorter rafter bar is preferred for refurbishment installations
- Solid 5mm steel, 25mm wide rafter bar with 4 fixing holes
- Can be supplied bent or twisted for side fixing for additional charge of £2 per bracket

KFL35 – 350mm Rafter Bracket

- Longer rafter bar can provide more secure fixing
- Solid 5mm steel, 25mm wide rafter bar with 4 fixing holes
- Can be supplied bent or twisted for side fixing for additional charge of £2 per bracket

Flex-Fit Rafter Brackets

Used for securing gutters by fixing to roof rafters

- **Recommended maximum 800mm interval spacing**
- **Should be installed to create fall of 10mm per 3.0m run**
- **Should be bent to required angle using KBO bracket bender**

K16 – 160mm Flex-Fit Rafter Bracket

- Uses flexible clips, attached with stainless steel rivets, to hold the gutter in place
- Solid 5mm, steel 25mm wide rafter bar with 4 fixing holes
- Can be supplied bent or twisted for side fixing for additional charge of £2 per bracket

K21 – 210mm Flex-Fit Rafter Bracket

- Uses flexible clips, attached with stainless steel rivets, to hold the gutter in place
- Solid 5mm, steel 25mm wide rafter bar with 4 fixing hole
- Can be supplied bent or twisted for side fixing for additional charge of £2 per bracket

K33 – 330mm Flex-Fit Rafter Bracket

- Uses flexible clips, attached with stainless steel rivets, to hold the gutter in place
- Solid 6mm, steel 30mm wide rafter bar with 4 fixing holes
- Can be supplied bent or twisted for side fixing for additional charge of £2 per bracket

REK21 – Rectangular 210mm Flex-Fit Rafter Bracket

- Uses flexible clips to hold the gutter in place
- Clips attached with stainless steel rivets
- Solid 5mm, steel 25mm wide rafter bar with 4 fixing holes

Rise & Fall Brackets

Used for securing gutters by driving into the wall

- **Recommended maximum 800mm interval spacing**
- **Should be installed to create fall of 10mm per 3.0m run**

IMPROVED RFKF – Rise & Fall Bracket

- Solid 5mm steel bracket with fixing nut
- 250mm threaded bar used to adjust gutter level
- 300mm spike used for drive in fixing to wall
- Threaded bar and spike require paint after installation

Radius Gutter Brackets

Used for fixing gutter sections to fit a curved roofline

NEW RSKR- Radius Gutter Bracket

- Combined gutter joint and fascia bracket
- 4° alignment deviation tolerance at each joint
- Requires 2 fixing screws per bracket
- Built in EPDM rubber gasket

Gutter Accessories

STAG – Stay Strap

- Used to provide added stability to gutters in areas subject to adverse weather conditions
- Clips to rolled front of gutter
- 5 fixing holes to secure to the roof

OSKR – Straight Overflow Protector

- Used to reduce gutter overflow at high flow sections
- Can be retro-fitted to gutter
- Hooks over gutter bead to secure
- Hooks attached with stainless steel rivets

OSK – Corner Overflow Protector

- Used to reduce gutter overflow at high flow corner sections
- Can be retro-fitted to gutter
- Hooks over gutter bead to secure
- Hooks attached with stainless steel rivets

LGB – Leafline Gutter Brush

- Used to catch leaves whilst allowing water to flow
- Supplied in 3m lengths
- No fastenings are required, cable ties may be preferred in high wind areas
- Stainless steel wire core with polypropylene bristles.

GRID – Gutter Leaf Guard (HD Polythene)

- Used to create a cover to prevent leaf blockage
- Supplied in 10m roll with 23 clips
- Clips are available in Black or White
- Additional clips can be purchased

Pipes & Fittings

Pipes

SROR – Downpipe

- Roll formed 0.6/0.7mm steel with solid seam (0.7mm for 120mm pipes)
- Hidden male/female joint, sockets are not required
- Supplied in 3m lengths as standard
- Also available in 2.5m or 1m shorter lengths

MST – Intermediate Pipe

- Typically used to make an offset with >100mm projection
- 1m length option supplied with double spigot male ends
- Can be cut to make two short pipes
- 0.5m length option supplied with male/female ends

MSTRA – Rod Access Pipe

- Used to provide access for maintenance rod to remove pipe blockages
- Supplied in 1m length with double spigot male ends
- Second spigot can be removed if not required
- Steel door can be unlocked and removed using plastics handles

PRT – Sliding Pipe

- Used with an RT Drain Trap
- Provides easy access for cleaning
- Fits outside the down pipe

Visit our website for the latest product updates:
www.lindab.co.uk/rainline

Pipe Brackets

Used for fixing pipes to the wall

- **Recommended maximum 1.5m interval spacing**

SSVH – Down Pipe Bracket

- Used to screw fix pipes to the wall
- Easy click function secures pipe in place
- Requires 2 screws for fixing

SVHA – Down Pipe Bracket

- Required for plain galvanised, Aluzinc or natural copper systems
- Used to screw fix pipes to the wall
- Wedge is used to secure pipe into place
- Requires 2 screws for fixing

SSV – Pipe Holder (for Spike)

- Used to attach pipe to spike fixed into the wall
- Easy click function secures pipe in place
- When pipe holder is closed the spike locks in place
- Spike is ordered separately

SV – Pipe Holder (for Spike)

- Required for plain galvanised, Aluzinc or natural copper systems
- Used to attach pipe to spike fixed into the wall
- Wedge is used to secure pipe into pla
- When pipe holder is closed the spike locks in place
- Spike is ordered separately

SST – Spike (for Pipe Holder)

- Used with pipe holder to fix pipe to the wall
- Spike is ordered separately, supplied in plain galvanised finish only
- Available in 125mm, 175mm, 250mm and 300mm lengths
- When pipe holder is closed the spike locks in place

Hoppers

Used with outlet spouts or to maximise pipe flow rate

VATKR – Regular Water Hopper

- Used at the head of a pipe that doesn't directly connect to a gutter
- Rectangular front with square sides
- 250 x 150 x 150mm

VATKL – Large Water Hopper

- Used with high flow outlet spouts or where multiple gutters meet
- Square top with inverted pyramid sides
- 260 x 260 x 290mm

Bends

Used for offsetting pipe stacks and traversing facade features

BK – Conical pipe bend

- Conical shape provides clean line while allowing male/female connection
- Top is perfect fit for outlets or male spigot ends of pipes
- Bottom fits directly into standard pipe
- Available in 45°, 70° and 85° variations

BM – Pipe bend with socket

- Traditional socket allows male/female connection
- Top will fit directly to a cut end of a standard pipe
- Bottom fits directly into standard pipe
- Available in 45°, 70° and 85° variations

SOKN – One-Piece Offset

- Used to offset a pipe stack usually to join to a gutter outlet or to traverse a plinth
- Set 100mm projection
- Longer offsets can be assembled using bends and cut down pipes (see page 17)

Shoes

Used at the bottom of a pipe stack

UTK – Pipe Shoe

- Angled pipe shoe used to discharge water into a drain or grate
- Socket fits directly to pipe
- Rolled rim ensures no sharp edges

BUTK – Drain Shoe

- Used to connect a pipe directly to a ground drain pipe
- Fits outside the down pipe
- Cover sits over drain pipe
- Can be lifted to provide maintenance access

RT – Drain Trap (HD Polythene)

- Used to prevent leaves and other blockages entering the drain
- Connects to 100mm drain pipe
- Should be used with PRT sliding pipe to allow cleaning

SLS – Self Cleaning Leaf Trap (HD Polythene)

- Used to filter leaves and other blockages from the drain pipe
- Angled design allows rainwater to clean the filter
- Connects to 100mm drain pipe
- Can be used with a BUTK Drain Shoe to fit 75mm or 87mm pipes

Connectors

GROR – Branch

- Used to merge a second pipe run into a pipe stack
- Branch can be positioned between 50° and 80°
- Standard branch will connect equal pipe diameters
- Unequal branches are available which will fit pipes with smaller diameters

SRORM – Pipe Connector

- Used to connect two pipes if the male spigot has been removed
- Allows pipe offcuts to be used
- Provides male/female connection

MRT – Drain Connector (HD Polythene)

- Used to directly connect to a ground drain pipe
- Stepped design fits to multiple sizes
- Fits up to 100mm down pipes and drain pipes

SLAS – Hose Connector

- Used to connect pipe directly to a hose
- Only available in 87mm
- Fits to 80mm hose

Diverters

Used to collect water in a water butt

FUTK – Adjustable Diverter

- Outlet spout manually opens and closes
- Spout attached with stainless steel rivets
- Fits directly to pipe stack

RWDK – Rainwater Diverter Kit (HD Polythene)

- Plastic components divert water through flexible hose
- 2 screw holes for wall fixing
- Fits to 75mm or 87mm pipe stacks

Vandal Reinforced Pipes & Fittings

Used in high traffic areas

- **Made of 2mm hot-dip galvanised steel or 1.5 mm stainless steel plate**
- **Can be connected to standard drain pipe using BUTK Drain Shoe**

NEW VSLS – Reinforced Leaf Trap

- Used to filter leaves and other blockages from the drain pipe
- Angled design allows rainwater to clean the filter
- Filter is stainless steel
- Fits to ground drain pipe

NEW VSLS – Reinforced Pipe with Leaf Trap

- Available in 850mm or 2m lengths
- Includes stainless steel SLS leaf trap filter
- Leaf trap can be raised on 2m option, out of reach of children
- Integrated stainless steel brackets
- Fits to ground drain pipe

NEW VUTK – Reinforced Pipe with Shoe

- Used to discharge water into a drain or grate
- Available in 850mm or 2m lengths
- Includes UTK shoe outlet
- Integrated stainless steel brackets

Accessories

DVSIL – Leaf Filter

- Used to filter leaves and other blockages from the drain pipe
- Sits inside drain pipe, suspended by hooks
- Usually used with BUTK Drain Shoe for cleaning
- Made from stainless steel

STIFT – Touch Up Paint

- Used to protect metal exposed during installation
- Drill holes, cut edges or scratches should be touched up
- Available to match all standard painted finishes
- Supplied in 12ml bottle with applicator brush

BF – Touch Up Paint

- Used for installation or maintenance touch up
- Supplied in 250ml tins
- Available to match all standard painted finishes
- Applicable COSHH sheets are available

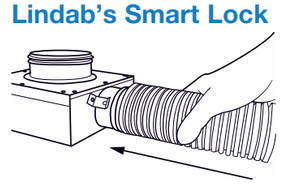
Lindab Inside

Residential ventilation by Lindab

It's in the air

InDomo is part of the **Lindab Inside** residential ventilation range. This semi rigid ducting system is designed for integration into residential buildings. **InDomo** is fitted with "Smart lock" as well as Lindab's renowned Safe gaskets which together provide a simple push and click airtight connection to plenum and distribution boxes. Available in 63 and 76mm nominal inside diameters **InDomo** comes with a host of accessories to simplify the installation of any heat recovery or mechanical extract system. **InDomo** has been tested and approved by BRE and can be used within the Standard Assessment Procedure (SAP) calculations via Appendix Q.

Lindab's Smart Lock



For more information on the **Lindab Inside** range including steel and plastic circular ducting as well as Tecduct low profile plastic ducting visit our website:

CASE STUDY

Grant House

This larch cladded, timber frame construction sits within a beautiful silver birch woodland site in the north of Scotland. A steel rainwater system was selected for the one and a half storey, two bedroom detached house by architect David Dittman. Local contractor MacGillivray Construction was used for the build.

The client, Kevin Grant, was pleased with the product and submitted the project as an entry to our My Rainline competition. Mr Grant has since built a garage and will be installing a matching Rainline system himself.

Read the full case study at www.lindab.co.uk/rainline

WINNER OF THE 2015 UK PASSIVHAUS AWARDS – SMALL PROJECTS

WINNER OF THE 2014 NORTHERN COUNTIES FBM AWARD FOR BEST ENERGY EFFICIENCY HOME

Steel Farm

Residential | Design & Build | Whitfield NE47

As organic farmers Trevor and Judith Gospel owned a plot of land where they dreamt of building a comfortable home that could accommodate them in their old age and minimise their impact upon the environment.

Steel Farm is located in the North Pennine Area of Outstanding Natural Beauty (ANOB). Built using traditional construction technology it is the first Certified Passivhaus in Northumberland.

Specialist Passivhaus architects LEAP selected Lindab steel guttering for the project which satisfied the strict environmental restrictions and budget which was tight due to significant costs of the planning process which strongly influencing the design.

To celebrate winning the UK Passivhaus Award for the small projects category architect Mark Siddall has prepared an in-depth 3-part case study “How to Successfully Design and Build Your Own Home ...Without Breaking The Bank”. Learn more and get free instant access at **PassivhausSecrets.co.uk**

For more information see www.lindab.co.uk/rainline

CASE STUDY

Ian Gray Garden Room & Skate Park – My Rainline Competition Winner

Builder Ian Gray embarked on a major garden refurbishment to build a skate park and garden room at his own family home in Fareham, Hampshire. The garden room structure was built as an example project and the builders have received a number of orders since.

Having never worked with Lindab Rainline before Ian selected the Rainline system to complement the stylish design of the timber building. Ian was impressed with how easy the product was to install, he entered and won the September 2015 My Rainline competition.

Keep up to date with Lindab competitions at www.lindab.co.uk/rainline

CASE STUDY Gardens Sorted Barn Conversion – My Rainline Competition Winner

Landscape Design company, Gardens Sorted specialise in renovation and bespoke garden installations.

The client for this former farmyard and threshing barn conversion gardens by organic principles therefore the need for non-PVC galvanised rainwater goods was paramount. Chris Bligh, designer and installer at Gardens Sorted created an innovative installation using an unusual combination of products. Chris was particularly impressed with the support and customer service he received; he entered and won the Jul 2015 My Rainline competition.

Keep up to date with Lindab competitions at www.lindab.co.uk/rainline

Lindab Chilled Beams

A product you know, a name you can trust

Lindab have been designing and building Chilled Beams such as **Polaris** and **Professor** for over 30 years.

Built on the expertise gained from the supply of over 100,000 of these highly regarded products, Lindab's new generation of beams **Premax** and **Premum** are providing even better performance, value and flexibility.

This new generation of beams incorporate Lindab's unique JetCone technology for accurate pre-commissioning and "No Loss" adjustment of air distribution.

These Eurovent certified products are supported by a whole cast of enhanced performance and innovative energy saving products such as Solus and the Pascal DCV system.

Quite simply Lindab is providing the next generation of indoor climate solutions – today!

Scan the QR code on the left with your smart phone to find out more about Lindab's Indoor Climate Solutions.

lindab | we simplify construction

Lindab Solus System
Simply the natural choice

Imagine a temperature balancing chilled beam solution where simultaneous cooling and heating is a thing of the past. Lindab Solus System secures savings on your investment, installation and running costs, by offering a simple yet highly effective new way of handling ventilation, cooling and heating.

By using the same water inlet temperature for both cooling and heating, the Solus solution simultaneously cools and heats individual rooms as required and under ideal conditions mixing the return water from the different zones results in a water temperature close to or equal to the needed inlet temperature allowing you to simply recirculate the water without need of further heating or chilling.

When used in conjunction with renewable energy sources very high savings in energy can be achieved when compared to conventional cooling systems.

Scan the QR code below or visit our website to find out more about Lindab Solus.

lindab rainline | the steel rainwater system

CASE STUDY

WINNER OF GREEN APPLE AWARD
WINNER OF YOUR MOVE PROPERTY BEST AFFORDABLE HOUSING AWARD

Queens Court – Winner of Green Apple Award

The Forrest Construction project for the Halton Housing Trust in Widnes has been recognised with a Bronze Award for the Built Environment and Architectural Heritage.

A steel rainwater system was specified by architect Denovo Design; the affordable housing scheme has been recognised for high environmental specification.

Lacey Street – Winner of Your Move Property Award

The Rainline project has received The Best Affordable Housing award which was judged in relation to many areas including; value for money, design and finish, quality of work, materials used, regeneration and sustainability of the scheme, environmental consideration of the development including landscaping and amenities.

Architect Denovo Design received the award for the Halton Housing Trust residential scheme. Denovo say, “Mild steel rainwater goods were specified because they need no maintenance, are more durable, much stronger in resisting snow loading than plastic, have the lowest carbon footprint and are 100% recyclable.”

Simplifying Specification

A general guidance framework for a specification for Lindab Rainline is provided below, content should be selected as appropriate to the project.

For a size specific NBS specification visit **www.ribaproductselector.com/lindab**, for further project specification advice contact **buildingproducts.sales@lindab.co.uk**

R10 Rainwater drainage systems

GENERAL	
• Gravity rainwater drainage system • Design to BS EN 12056-3:2000 Gravity drainage systems inside buildings. Roof drainage, layout and calculation (AMD 17041), 2000. • Gutters, pipes and fittings to BS EN 612:2005: Eaves gutters with bead stiffened fronts and rainwater pipes with seamed joints made of metal sheet	
MANUFACTURER

PRODUCT SPECIFICATION (GUTTERS AND FITTINGS)	
332 CONTINUOUSLY HOT DIP COATED STEEL GUTTERS/ 335 GALVANISED STEEL GUTTERS/ 330 COPPER GUTTERS	
Product reference:	Rainline coated steel/ galvanised steel/ copper gutter system
Profile:	R Half Round/ RER Rectangular
Size:	100mm/ 125mm / 150mm/ 190mm/ 136mm
Outlet size:	75mm/ 87mm/ 100mm/ 120mm
Grade:	0.6mm steel/ 0.6mm copper
Finish:	045 Silver metallic/ 044 Anthracite metallic/ 778 Copper metallic/ 015 Black/ 001 Antique white/ 087 Dark grey/ 434 Brown/ 742 Tile red/ 758 Dark red/ 830 Pine green/ 387 Coffee Brown/ Plain Galvanised/ Aluzinc/ Natural Copper
FITTINGS	
Joints:	RSK gutter joint/ RERSK rectangular gutter joint/ roll joint method /As drawing ___ / Contractor's choice
Stop ends:	Not required/ RG Self-locking stop end/ RGV Left hand stop end/ RGH Right hand stop end/ RERGV Left hand rectangular stop end/ RERGH Right hand rectangular stop end/ As drawing ___ / Contractor's choice
Angles:	Not required/ RVI Internal 90° gutter angle/ RVI Internal 135° gutter angle/ RVY External 90° gutter angle/ RVY External 135° gutter angle/ RERVI Internal rectangular 90° gutter angle/ RERVI Internal rectangular 135° gutter angle/ RERVY External rectangular 90° gutter angle/ RERVY External rectangular 135° gutter angle/ As drawing___ / Contractor's choice
Outlets:	OMV Gutter outlet/ OK Gutter outlet /REOK Rectangular nozzle/ As drawing___ / Contractor's choice
Brackets:	KFK Fascia bracket/ KPK Lightweight fascia bracket/ K24 240mm Flex-fit fascia bracket/ K07 70mm Flex-fit fascia bracket/ SSK Adjustable fascia bracket/ KFM 150mm Rafter bracket/ KFL 200mm Rafter bracket/ KFL35 350mm Rafter bracket/ K16 160mm Flex-fit rafter bracket/ K21 210mm Flex-fit rafter bracket/ K33 330mm Flex-fit rafter bracket/ RFKF Rise and fall bracket/ RSKR radius gutter bracket/ REK07 Rectangular 70mm flex-fit fascia bracket/ REK21 Rectangular 210mm rafter bracket/ As drawing ___/ Contractor's choice
Overflow protectors:	Not required/ OSKR Straight overflow protector/ OSK Corner overflow protector/ As drawing ___ / Contractor's choice
Stay straps:	Not required/ STAG stay strap/ As drawing ___ / Contractor's choice
Accessories:	Not required/ LGB Leafline gutter brush/ GRIDB Gutter leaf guard (HD Polythene)
PRODUCT SPECIFICATION (PIPES AND FITTINGS)	
395 HOT DIP COATED STEEL PIPEWORK – PRESSED/ 370 GALVANISED STEEL PIPEWORK/ 431 STAINLESS STEEL PIPEWORK/ 390 COPPER PIPEWORK	
Product reference:	Rainline coated steel/ galvanised steel/ copper/ stainless steel pipe system
Profile:	SROR Round/ VANDAL Reinforced Round
Size:	75mm/ 87mm / 100mm/ 120mm/ 102mm
Grade:	0.6mm steel/ 0.7mm steel (120mm only)/ 2.0mm (102mm only)/ 1.5mm stainless steel (102mm only)/ 0.6mm copper
Finish:	045 Silver metallic/ 044 Anthracite metallic/ 778 Copper metallic/ 015 Black/ 001 Antique white/ 087 Dark grey/ 434 Brown/ 742 Tile red/ 758 Dark red/ 830 Pine green/ 387 Coffee Brown/ Plain Galvanised/ Aluzinc/ Natural Copper/ Stainless Steel
Joints:	Male/ female jointing
FITTINGS	
Bends:	Not required/ BK 70° Conical pipe bend/ BK 45° Conical pipe bend/ BK 85° Conical pipe bend/ BM 70° Pipe bend with socket/ BM 45° Pipe bend with socket/ BM 85° Pipe bend with socket/ As drawing ___ / Contractor's choice
Offsets:	Not required/ SOKN One-piece offset/ Created using bends and intermediate pipe/ As drawing___ / Contractor's choice
Intermediate pipe:	Not required/ MST Intermediate pipe 1m/ MST Intermediate pipe 0.5m/ As drawing___ / Contractor's choice
Access pipe:	Not required/ MSTRA Rod access pipe 1m/ PRT Sliding pipe/ As drawing___ / Contractor's choice
Branches:	Not required/ GROR Pipe branch/ GROR Unequal pipe branch/ As drawing___/ Contractor's choice
Connector:	Not required /SRORM Pipe connector/ SLAS Hose Connector/ MRT Drain connector (HD Polythene)/ As drawing___/ Contractor's choice

Shoes:	Not required/ UTK Pipe shoe/ BUTK Drain shoe/ As drawing ___/ Contractor's choice
Hoppers:	Not required/ VATKR Regular water hopper/ VATKL Large water hopper/ As drawing___/ Contractor's choice
Diverter:	Not required/ FUTK Adjustable diverter/ RWDK Rainwater diverter kit (HD Polythene)/ As drawing ___ / Contractor's choice
Brackets:	Not required/ SSVH Downpipe bracket/ SVHA Downpipe bracket/ SSV Pipe holder (for spike)/ SV Pipe holder (for spike)/ SST Spike (for pipe holder)/ As drawing ___/ Contractor's choice
Reinforced pipes:	Not required/ VSLS Reinforced leaf trap/ VSLS09 Reinforced Pipe with leaf trap 0.85m/ VUTK09 Reinforced pipe with show 0.85m/ VSLS2 Reinforced pipe with leaf trap 2m/ VSLST2 Reinforced pipe with raised leaf trap 2m/ VUTK2 Reinforced pipe with show 2m/ As drawing ___ /Contractor's choice
Accessories:	Not required/ DVSIL Leaf filter (stainless steel)/ RT Drain Trap (HD Polythene)/ SLS Self-cleaning leaf trap (HD Polythene)

Recommendations

INSTALLATION GENERALLY:

- Install pipework/gutters to ensure the complete discharge of rainwater from the building without leaking.
- Obtain all components for each type of pipework/guttering from the same manufacturer unless specified otherwise.
- Provide access fittings and rodding eyes as necessary in convenient locations to permit adequate cleaning and testing of pipework.
- Avoid contact between dissimilar metals and other materials which would result in electrolytic corrosion.
- Do not bend plastics or galvanized steel pipes. Adequately protect pipework/gutters from damage and distortion during construction.
- Where not specified otherwise use plated, sherardised, galvanised or nonferrous fastenings, suitable for the purpose and background, and compatible with the material being fixed.

FIXING AND JOINTING:

- Fix gutters securely at maximum 800mm centres and at all joints in gutters, with additional brackets near angles and outlets.
- Ensure that roofing underlay is dressed into gutter.
- Ensure that outlets are securely fixed before connecting pipework. To cut the hole for the outlet a hack saw or metal cutting hole saw should be used. Use a hammer on the edges to create a drip edge.
- Fix pipes securely at maximum 1.5m centres plumb and/or true to line. Fix every length of pipe at or close below the coupling.
- Make changes in direction of pipe runs only where shown on drawings unless otherwise approved.
- Fix branches and low gradient sections with uniform and adequate falls to drain efficiently. Provide additional supports as necessary to support junctions and changes in direction.
- Fix externally socketed pipes/fittings with sockets facing upstream.
- Provide a load bearing support for vertical pipes at not less than every storey level. Tighten fixings as the work proceeds so that every storey is self-supporting and undue weight is not imposed on fixings at the base of the pipe.
- Cut ends of pipes to be clean and square with burrs and swarf removed. Ensure that jointing surfaces are clean immediately before assembly.

CUTTING:

- Cut the gutters and pipes with plate shears, hacksaw or chop saw on a firm underlay on the ground.
- Never use an angle grinder. It heats the steel up and thus destroys the galvanisation. The coating may also be scorched by hot chips or filings.

COATED PIPEWORK/GUTTERS:

- Make sure that the roof drainage components are handled with care during transport, storage and unpacking. If not, the coating may be damaged or the pipes and gutters dented.
- Store pipes and gutters on a plane and stable surface.
- Non coated components must be unpacked and stored in a dry and ventilated place.
- Make good to coatings after cutting and any other damage or recoat.

ACCESS FOR TESTING AND MAINTENANCE:

- Install pipework and gutters with adequate clearance to permit testing, cleaning and maintenance.
- Position access fittings and rodding eyes so that they are not obstructed by other pipework, framing, etc.

TESTING:

- Inform the Contractor Administrator sufficiently in advance to give him a reasonable opportunity to observe tests.
- Check that all sections of installation are free from obstruction and debris before testing.
- Provide clean water, assistance and apparatus for testing as required.
- Carry out tests as specified. After testing, locate and remedy all defects without delay and retest as instructed.
- Keep a record of all tests and provide a copy of each to the Contractor Administrator.
- To complete a gutter test- block all outlets, fill gutters to overflow level and after 5 minutes closely inspect for leakage.

MAINTENANCE:

- Complete maintenance on the system 1-2 times a year.
- Clean the gutter and pipes from leaves and debris. Wash with water and a mild detergent.
- Don't use a high pressure washing appliance.
- At completion, submit printed instructions recommending procedures for maintenance of the rainwater installation including full details of the recommended inspection, cleaning and repair procedures.

BEFORE HANDOVER:

- Remove construction rubbish and debris from all roofs and gutters. Where possible, sweep and remove fine dust which may enter rainwater systems. Do not sweep or flush dust or debris into the rainwater system.
- Remove swarf, debris and any temporary caps from the entire rainwater installation.
- Ensure that all access covers etc. are secured complete with all fixings.

Good Thinking

At Lindab, good thinking is a philosophy that guides us in everything we do. We have made it our mission to create a healthy indoor climate – and to simplify the construction of sustainable buildings. We do that by designing innovative products and solutions that are easy to use, as well as offering efficient availability and logistics. We are also working on ways to reduce our impact on our environment and climate. We do that by developing methods to produce our solutions using a minimum of energy and natural resources, and by reducing negative effects on the environment. We use steel in our products. It's one of few materials that can be recycled an infinite number of times without losing any of its properties. That means less carbon emissions in nature and less energy wasted.

Rainline

Lindab's roof drainage system is the most extensive and tried and tested of its kind on the market. The range includes individual products as well as complete systems – all in a wide range of colours to give you a host of possibilities. The systems are installed quickly without the need for a joint compound or special tools, and are characterised by high quality, sustainabilityand flexibility. Rainline is made from painted, galvanised sheet metal for good weather resistance, excellent protection against rust, high colour stability and a durable, attractive finish.
